

THE BRODESSER CANCER CENTER

When you're looking for cancer treatment, you want the best quality care you can find, delivered by skilled and compassionate people, close to home. That's what you'll find in Cape Regional Health System's cancer care program at the Thomas and Claire Brodesser Jr. Cancer Center.

We are also a proud member of the Penn Cancer Network, a select group of hospitals throughout the tri-state area that work in collaboration with Penn Medicine's Abramson Cancer Center to provide a full spectrum of today's most advanced cancer care.

A team approach to cancer care

We approach as many cases as possible as a multidisciplinary team. That means your surgical oncologist, medical oncologist, radiation oncologist, pathologist and other team members will meet to discuss your case and the best way to approach it. We work together so that every aspect of your care is coordinated and you get the best treatment—the best results—possible.

Our program includes

- Low-Dose CT screening with the most advanced technology providing clear and precise scans
- Interpretation of scan by a Board-Certified Radiologist
- Communication of results to ordering physician
- Follow up and further treatment, if necessary

Cancer Care. Close to Home.

CANCER CARE

Cancer Care Services

We offer a wide range of cancer treatment services in Cape May County, including:

- Cancer Care Navigation Program.
- Cancer screening and diagnosis.
- Cancer staging.
- Diagnostic Imaging.
- Hospice care.
- Lifestyle support.
- Long-term cancer treatment and monitoring.
- Lymphedema treatment.
- Medical oncology.
- Nonsurgical cancer treatment.
- Physical Therapy.
- Pre-treatment evaluation.
- Radiation therapy.
- Referral to clinical trials.
- Second opinions.
- Speech Therapy.
- Surgical intervention.

Cancers We Treat

Our team can provide diagnosis and treatment for a wide range of cancers, including:

- Breast cancer.
- Colon cancer.
- Lung cancer.
- Prostate cancer.
- Rectal and anal cancer.
- Skin Cancer.

- Gynecological cancer.
- Hematologic cancer.
- Hemoskeletal cancer.

Importantly, our relationships with the Penn Cancer Network allow us to give our patients access to the best cancer specialists and treatments regardless of what type of cancer they have.

Cancer-Fighting Technology

For people with cancer, access to the latest treatments can make all the difference. We're committed to providing the people of Cape May County with the best cancer treatment technology available.

TrueBeam™ Radiation Therapy. We're the only cancer center in Cape May County to offer this innovative technology. It delivers powerful radiation treatments with pinpoint precision.

TrueBeam™ delivers a full range of radiotherapy modalities, including:

- **RapidArc™ Radiotherapy Technology.** This technique increases the accuracy of targeted radiation, which allows for faster treatment times and minimizes the chance of adversely affecting healthy tissue.
- **Gated RapidArc.** This is a relatively new approach that compensates for tumor motion during treatment. This means we can choose the best form of treatment for each patient.

- **Stereotactic body radiation therapy (SBRT).** This technology delivers precise radiation therapy to tumors anywhere in the body—often in 10-15 minute treatments instead of 45 minutes or longer using other radiation therapy techniques. SBRT is commonly used to treat lung cancer and prostate cancer. At Cape Regional, a course of SBRT for lung cancer can typically be completed in 3 treatments and a course of SBRT for prostate cancer can be completed in 5 treatments.
- **Image-guided radiation therapy (IGRT).** This is a fully robotic imaging system that allows oncologists to pinpoint tumors within the body before delivering cancer treatment.
- **Intensity-modulated radiation therapy (IMRT).** This computer-driven technology allows for precise radiation delivery, which helps protect surrounding organs and tissues during cancer treatment.

Delivering radiotherapy using TrueBeam leads to fewer hot spots, fewer side effects and less time in treatment compared with using the cyberknife.
